COST application European Monetary Unification (EMU)

The history of money and monetary systems is a truly international exercise. Throughout history money has travelled beyond borders and shaped identities. Norway has so far decided to be outside Euroland, we are, however, continuously monitoring the euro as monetary standard. A European research program on European monetary unifications would be highly beneficial for developing our understanding of monetary unions in the past and present, especially in cooperation with other European research institutions.

Yours sincerely,

Svein H. Gullbekk
Associate professor
Dept. of Archaeology
Museum of Cultural History
